Professional Summary

Computer Engineering graduate with a strong foundation in Core Java, Object-Oriented Programming, Data Structures, SQL, Spring Boot, and REST APIs. Skilled in developing backend applications, database-driven solutions, and scalable software using clean coding and software engineering principles. Hands-on experience through internship and academic projects involving Java, Spring Boot, MySQL, API development, testing, debugging, and Git. Strong problem-solving skills with 100+ coding and SQL problems solved and a Top 5 finish in a hackathon. Seeking an Associate Software Engineer opportunity to contribute to high-quality software solutions and grow in a collaborative engineering environment.

Internship Experience

Software Development Intern, *Elvates Lab* 07/2024 – 08/2024
Remote

- Assisted in developing backend modules using **Java and Spring Boot** following MVC architecture.
- Developed and optimized **SQL queries, joins, and database views** for efficient data access.
- Performed **API validation, functional testing, and debugging** using Postman.
- Designed normalized database schemas to support efficient and reliable data management.
- Used **Git** for version control and collaborated within an **Agile development workflow**.

Education

Bachelor of Engineering (B.E.) – Computer Engineering, 2026
Jagdambha College of Engineering and Technology, Yavatmal
CGPA: 9.07/10

HSC (Maharashtra State Board)
90%

SSC (Maharashtra State Board)
89.80%

Technical Skills

Programming Languages
Java, JavaScript, SQL, Python (Fundamentals)

Database
MySQL, MongoDB , Query Optimization, Joins, Views, Normalization

Concepts
OOP, Data Structures, Exception Handling, Multithreading, API Development, Debugging, Functional Testing, Agile Development, Microservices (Fundamentals)

Backend Technologies
Spring Boot, Spring MVC, RESTful APIs, MVC Architecture, CRUD Operations

Tools
Git, GitHub, Postman, IntelliJ IDEA, Eclipse, VS Code

Frontend:
React.js, HTML5, CSS3, JavaScript, Responsive Web Design

Projects

E-Commerce Website, *Java, Spring Boot, MySQL*
• Developed a backend application using Java and Spring Boot to manage product, cart, and order workflows.• Designed and implemented RESTful APIs for user authentication, product listing, cart operations, and order processing.• Integrated MySQL for structured and reliable application data management.• Applied MVC architecture and object-oriented programming principles to develop modular and maintainable backend components.• Performed API testing and application workflow validation using Postman.

Social Media Web Application, *MERN Stack (MongoDB, Express.js, React.js, Node.js)*
- Developed a full-stack web application using **MongoDB, Express.js, React.js, and Node.js**.
- Built responsive and component-based user interfaces using **React.js**.
- Developed **RESTful APIs** for user management, authentication, post creation, likes, and feed updates.
- Integrated **MongoDB** for scalable NoSQL data storage and efficient data retrieval.
- Performed API testing and functional validation using development and testing tools.
- Applied component-based architecture and backend integration patterns to support maintainable application development.

DoomShelf – Smart Inventory Tracker, *Java, Supabase*
- Built desktop inventory system with barcode scanning and OAuth authentication.
- Designed modular backend APIs for product data, user operations, and inventory updates.
- Implemented real-time product synchronization.
- Conducted debugging and feature validation during the development lifecycle.
- Applied modular architecture and OOP principles for scalability and maintainability.

Employee Management System, *PHP, MySQL*
- Created CRUD system for employee and leave tracking with validation.
- Designed and structured relational database schema using MySQL with normalization.
- Developed a web-based system to manage employee records, attendance, and leave tracking.
- Optimized SQL queries for efficient data retrieval and reduced redundancy.

Kissan Connect, *Java*
- Developed backend logic for agricultural trade platform connecting farmers and buyers.
- Designed and implemented core modules for product listing, user registration, and transaction handling.
- Built structured data handling using Java and MySQL with normalized database design.
- Implemented CRUD operations for managing products, users, and orders efficiently.
- Applied Object-Oriented Programming (OOP) principles to ensure modular and maintainable code.

Certifications

Oracle Cloud Infrastructure 2025 Certified Generative AI Professional
AI & Generative AI: OCI Generative AI Certified Professional, AI-assisted development tools

Java Programming Fundamentals – Infosys Springboard

SQL (Basic & Intermediate) – HackerRank

Achievements

Finalist (Top 5) in Hackathon 2025
for DoomShelf Application

Solved 100+ coding and SQL problems
focusing on backend logic and problem-solving.
